

## Small Animal Anesthesia Machine

- Economical full featured anesthesia system
- Suitable for rebreathing and non-rebreathing circuits
- Vaporizer at eye level for easy setup and adjustment
- Optional mounting for second vaporizer

### Vaporstick Plus

The Vaporstick Plus, anesthesia delivery system features a one-piece aluminum frame construction and provides a universal mounting bracket for an out-of-circuit vaporizer such as the Tech3, Tech4 or Ohio-Style vaporizers. The baked on 'powder-coat' finish makes it easy to clean and virtually chip-proof.

The bored block system minimizes the use of hoses and fittings, which reduces the chance of leaks occurring in your anesthesia machine. The tapered ports allow an easy conversion from a non-rebreathing system to a closed circuit system. The directional valves are trouble-

free, and the vertical style virtually eliminates valves being stuck in the open position.

The absorber canister is located under the block. This location protects the canister from breakage and reduces the space needed for the CDS 2000. The canister system is stabilized by an center mounted attachment system which draws the canister to the top with a few easy turns.

The flush valve, by design, is limited to half the amount of oxygen flow of other manufacturer's machines. This lower flow rate will help prevent dangerous pressures from building as quick, but still allows ample flow for quick oxygenation of the patient. The graduated scale of the flowmeter, ranging from 0.2 to 4 LPM, allows accurate settings for the patient and virtually eliminates the need for a dual flowmeter.

The unit is mounted on a spider base (5 legs) for maximum stability and maneuverability. The optional oxygen yokes, can easily be added to the stand for portability.

An optional universal vaporizer mounting bracket, can be added to accept a second vaporizer of any style.

- Economical anesthesia delivery system
- Dedicated unit for non-rebreathing circuits
- Available with optional universal vaporizer mounting bracket
- Can be up-graded to a rebreathing system with option free-standing CO<sub>2</sub> absorber system

### Vaporstick

The Vaporstick is a utility unit designed to supply oxygen to non-rebreathing systems, intensive care units and nebulizers. The flowmeter, adjusts from 0.2 to 4 LPM for accurate patient settings. A flush valve is included for fast immediate oxygen.

An optional universal vaporizer mounting bracket and endcaps, will accept most precision vaporizers used in veterinary medicine.

The unit is mounted on a stable spider base (5 legs) and a post assembly. A modified Jackson Rees non-rebreathing circuit, is included with the unit. By adding your choice of options, you can customize the Vaporstick to suit your research anesthesia requirements.

Catalog No.	Product
CGS 8048.68	Vaporstick Plus Anesthesia Machine
CGS 8049.68	Vaporstick Plus with Dual O <sub>2</sub> Flowmeter
CGS 8059.68	Vaporstick Plus with O <sub>2</sub> and N <sub>2</sub> O Flowmeters and Failsafe
<b>Optional Accessories</b>	
CGS 8051.68	Single O <sub>2</sub> E-cylinder Regulator and Double Tank Holder
CGS 8052.68	Dual E-Cylinder O <sub>2</sub> Tank Yokes Holder and Regulator
CGS 8053.68	Add-on Mayo Tray
CGS 8054.68	Mounting Bracket for Second Vaporizer
CGS 8055.68	Vaporizer End Cap, Male
CGS 8056.68	Vaporizer End Cap, Female
