

## Anesthesia Vaporizers

- Vaporizers available for Isoflurane, Halothane, Sevoflurane
- Three different vaporizer styles from which to choose
- Key and Funnel Fill versions available for all vaporizers
- Annual service and vaporizer conversion available upon request

### Anesthetic Vaporizers

Harvard Apparatus now offers a wide range of remanufactured anesthetic vaporizers. These vaporizers are from the two most popular manufacturers of vaporizers in the world, Cyprane and Ohmeda (formerly Ohio Medical) and come with a full warranty. With annual maintenance, they will offer a lifetime of service. Three different styles are available: Tech3, Tech4 and Ohio 100 series. Each have two fill options, Key-Fill or Funnel-Fill. Halothane and Isoflurane specific vaporizers are available in all styles. Sevoflurane vaporizers are available in Tech4 and Ohio 100 styles only.

All styles are designed to be unaffected by pressure, temperature and flow rate to give you accurate levels of agent concentrations. For Isoflurane, Halothane, or Sevoflurane, all vaporizers are available in Funnel-Fill or Key-Fill styles. Key-Fill vaporizers require the use of a fill adapter which is screwed onto the anesthetic agent bottle. The use of Key-Fill prevents the unintentional addition of the wrong anesthetic agent into a vaporizer. The vaporizer styles provide accurate delivery of anesthetic agent in the following ranges: For Tech4 Style settings are from 0.5% - 5% at 0.5% increments, for Ohio Style settings are from 0.25% -5% at 0.25% increments and for Tech3 Style settings are from 0.5% -5% at 0.5% increments). Simply choose the anesthetic agent and fill method and the vaporizer which offers the range and resolution desired.

| Catalog No. | Product                                 |
|-------------|---|
| CGS 8084.68 | Tech4 Isoflurane Funnel-Fill Vaporizer  |
