

Horizontal Gel Units

Midi-Horizontal Gel Unit

Designed for both analytical and preparative studies of nucleic acids. These units have the same features as the Mini-Units but with the addition of buffer recirculation ports. Four comb positions allow up to 112 samples to be screened on one gel. This unit is supplied complete with 1 x gel casting tray, 2 x 1.0 mm 16 sample combs, and buffer recirculation ports.

- Ideal for analytical and preparation studies of nucleic acid
- Removable UV transparent gel casting tray for easy gel handling and visualization
- Gel dimensions: 130 x 150 mm (W x L)
- Maximum number of samples: 112
- Buffer volume: 900 mls
- Complete with two combs
- Wide range of combs available

Maxi-Horizontal Gel Unit

Designed for both analytical and preparative studies of nucleic acids. The unit features as standard, buffer recirculation ports, to prevent buffer depletion. Four comb positions permit the screening of up to 160 samples. Gel casting gates, which have a silicone rubber edge gasket, fit into a removable gel casting tray, to provide leak-free gel pouring. This unit is supplied complete with 1 x gel casting tray, 2 x 1.0 mm 16 sample combs, and buffer recirculation ports.

- Ideal for analytical and preparation studies of nucleic acid
- Removable UV transparent gel casting tray for easy gel handling and visualization
- Gel dimensions: 200 x 220 mm (W x L)
- Maximum number of samples: 160
- Running buffer volume: 3 Liters
- Complete with two combs
- Wide range of combs available
- Casting gates, with an edge gasket
