ESA Coulochem® II Electrochemical Detector Redefining the Limits of HPLC-ECD

HPLC electrochemical detection begins with the Coulochem II Detector. The Coulochem II combines sensitivity, selectivity and stability to bring you an HPLC electrochemical detector that meets the demands of even the most complex analytical problems.

The heart of the Coulochem is the dual electrode coulometric electrochemical cell. By using a combination of operational modes and specialized sensors, the Coulochem II delivers performance above that of fluorescence, UV and RI detectors.
